

NAME

`rrdlast` – Return the date of the last data sample in an RRD

SYNOPSIS

`rrdtool last filename [--daemon|-d address]`

DESCRIPTION

The `last` function returns the UNIX timestamp of the most recent update of the RRD.

filename The name of the **RRD** that contains the data.

`--daemon|-d address`

Address of the `rrdcached` daemon. If specified, a `flush` command is sent to the server before reading the RRD files. This allows **rrdtool** to return fresh data even if the daemon is configured to cache values for a long time. For a list of accepted formats, see the `-I` option in the `rrdcached` manual.

```
rrdtool last --daemon unix:/var/run/rrdcached.sock /var/lib/rrd/foo.rrd
```

ENVIRONMENT VARIABLES

The following environment variables may be used to change the behavior of `rrdtool last`:

RRDCACHED_ADDRESS

If this environment variable is set it will have the same effect as specifying the `--daemon` option on the command line. If both are present, the command line argument takes precedence.
